Conducting a forced landing due to engine failure

(location) At riddell airfield, (how many passengers on board) 2 POB (Passengers on board), high wing, red and white aircraft, we will contact you again when we land safely on the ground.

Adventure Flight Training

FCOST:

Fuel – check fuel is on/swap tanks (if applicable)

Choke & Carby heat – check choke is pushed in and turn Carby heat on

Oil – is there oil pressure (if not, you won't be able to start aircraft – STOP FCOST)

Switches – Check both ignition switches (one of them might be working, check on Both)

Throttle – go through the range on the throttle, there might be a 'sweet spot' where it may work.

Passenger Brief

We are currently gliding to the runway because of engine issues, can you please remove any sharp objects you have on you such as glasses, pens, pencils and place it on the floor, tighten your seatbelt.

(If required and you think there could be issues with damage to airframe on landing – it might be wise to get your passenger to open the door so you can get out) When I tell you, I will get you to unlatch your door and open it.
